1.2. DISTRICT PROFILE (detail of geographical area, cultivation, Land, resources, opportunities, irrigation, populations etc.)–

The district lies in the north western portion of the State. It is bounded on the north by Jharkhand State, on the south by Jharsuguda, Sambalpur and Deogarh districts, on east and north-east by Keonjhar and Paschimi Singhbhum districts of Odisha and Jharkhand, on the west and north-west Raigarh district of Chhatisgarh. The district headquarters is located at Sundargarh.

Temperature (Max)	260 - 410 C	Geographical Area	9,712 Sq. Kms.
Temperature (Min)	120 - 280 C	Area	9,71,244 ha.
Avg. Rainfall	1200 mm	Total cultivable land in the district (ha.)	3,36,050
Avg. Rainy days	60	Misc. tree crops & grooves	3,897 ha. (16.53%)
Relative Humidity	47 - 89%	Permanent pasture & other grazing area	30,349 ha. (3.12%)
Wind Velocity	2 - 7 km/hour	Cultivable waste	39,945 ha. (4.11%)
Small Farmers	50,338	Land put to non-agril. Uses	49,249 ha.
Marginal Farmers	62,817	Barren & uncultivable land	41,562 ha.
Big Farmers	32,484	Current Fallow	61,109 ha.
Major rivers	Brahmani, Sankh & Koel – Tributary of Brahmani and IB- Tributary of Mahanadi	Other fallow	41,325 ha.
Major crops of the district	Paddy, black gram, green gram, arhar, horse gram, sesamum, groundnut, mustard, wheat and maize	Forest area	1,60,583 ha.
		Net Area sown	3,13,000 ha. (32.22%)
		Irrigated land (ha.)	31,924
		Rain-fed land (ha.)	3,04,126

Geographically, the district is not a compact unit and consists of widely, dissimilar tracts of expansive and fairly open country, dotted with isolated peaks, inaccessible forests, river valley and mountainous terrain. Broadly speaking it is an undulating table-land of different elevations broken up by rugged hill ranges and cut off by torrential hill streams and the river Ib and Brahmani. The general slope of the district is from north to south. There is an open well-cultivated plain country along the valley of the Ib river particularly in the south. The rest of the Sadar sub-division consists of undulating table-land about 700 ft. in average height, dotted here and there with hills and peaks rising to about 2000ft., in the western most tracts at hemgir P.S. in the north there is a gradual rise to the table-land of Chhotanagpur. The portion occupied by Bonai sub-division to the south-east has rugged forest and hills intersected by gorges and passes and having a narrow valley of the Brahmani river and its tributaries. For a short spell of time during the rainy season the rapid current of the hill-streams cut off communication. The east and west of the brahmani valley is filled with high range of mountains, ft.) Chheliatoka (3331 ft.) and Bichakani (2964 ft.) in the east. The last hill has acquired importance as it contains million of tonnes of iron-ore for use in Rourkela steel plant. The territory of Sundargah and Panposh sub-divisions comprising the ex-states of Ganagpur is about 700 ft. above the sea level. Bonai sub-division comprising ex-State of Bonai is about 800 ft. above the sea level. The forest of the district is of northern tropical dry deciduous type, mainly containing Sal, Assan and Kurum. The eastern half of Bonai and Rajagangapur contain better quality of vegetation. The forest area is mostly studded with rich mineral deposits, like iron ore, manganese, limestone, lead; also forest products like bamboo, timber and kendu leaf which are export-oriented. The district was a very inaccessible tract having no proper communication. The tribal people living in the area used to subsist for the most part of shifting cultivation which resulted in denudation of forest. The forest occupy an area of 3534.92 sq.kms which includes 2664.64 sq. kms. under reserved forest and 612.07 sq.kms. under protected forest. The forests are of northern tropical dry deciduous type. Sal is the dominant species. The eastern half of Bonai contain better quality of vegetation. The principal forest produce are timber, kendu-leaf and bamboo besides minor product like sabai grass. lac, tassar, myrabolan, mahua, kusuma seed, resin, tamarind, gum and sal seed.

1.3. DETAILS OF ADOPTED VILLAGE during 1.4.2012 to 31.3.2013 (Approved by competent Authority in meetings/workshops)

KVK Name	Village Name	Year of adoption	Block Name	Distance from KVK	Population	Number of farmers (having land in the village)

Sundargarh-1	Birjaberna	2014-15	Sadar	17	354	56

1.4. THRUST AREAS identified by KVK (Approved by competent Authority in meetings/workshop)

Identified Thrust Areas
To increase yield by substituting local / degraded varieties in vegetables and field crops.
To control disease & insect pest by integrated methods of pest control with organic articulation.
To promote integrated nutrient management in crop production.
To promote cultivation of lucrative off-season vegetables.
Emphasize on increasing the acreage of the fruit crops like mango, banana on commercial scale .
Popularise diversified cropping pattern in uplands (Oilseeds/Pulses/Maize).
Popularise integrated weed & nutrient management in crop production .

1.4. PROBLEM IDENTIFIED by KVK (Approved by competent Authority in meetings/workshop)

KVK Name	Problem identified	Methods of problem identification
Sundargarh-1	Distress sale of paddy.	PRA , Focus group discussion, Observation
Sundargarh-1	Local varieties are having low production potential and are susceptible to pest & diseases.	PRA , Focus group discussion, Observation
Sundargarh-1	Indiscriminate use of pesticides and fertiliser in irrigated areas.	PRA , Focus group discussion, Observation
Sundargarh-1	Poor income from upland crops.	PRA , Focus group discussion, Observation
Sundargarh-1	Poor income from animal husbandry	PRA , Focus group discussion, Observation
Sundargarh-1	Poor off farm income of resource poor farm families.	PRA , Focus group discussion, Observation

2.1a Recommendations of OFTs

Recommendations		
Title of OFT	For Farmers	For Deptt. Personnel
Assessment of effect of post emergence herbicide Bispyribac sodium in direct seeded paddy	It controls the grasses effectively as post emergence herbicides.	Its effect on the growth of crops is less. Weed control efficiency is more than 75%.
Assessment of crop management practices in mustard	It's a better practice in irrigated condition. The yield is 5 times higher than direct sowing of mustard.	It is proven technology and practiced more in our neighbor state like Bihar. It requires more awareness.
Assessment of different sowing methods in sesamum, c.v. Prachi	Best farmers practice. Copes with different abiotic and biotic adverse conditions.	This low cost indigenous practice need spread among farmers.
Assessment of different nursery raising media / method in cucurbit (Watermelon) for ransplanting	October sowing yielded more because of synchronization of bulb formation with the decreasing temperature .	Sowing window of Garlic recommended is second fortnight of Oct
Assessment of planting time of Garlic c.v Yamuna Safed 3	Planting during the onset of monsoon increases the size of the xorm and Fetches more market price and bulb size is moderate.	YS-3 is suitable for the district
Assessment of Onion varieties during kharif	Bheema is much bigger in size during kharif, fetches more price	Ensuring availability of quality planting material in time.
Assessment of IPM against fruit and shoot borer in brinjal	The pest incidence decreases with the folowinig of the ipm schedule	Thoug the cost of adopting this technique is more than the normal practice it gives sustainability to the system
Assessment of potato varieties in irrigated medium land of plateu eco system	Kufri pukhraj yields much better but kufri jyoti is good in tastes	All the varieties are suitable to the district as per preferences of the farmers
Analyzing various Steps & Channels involved in marketing of food Grains	The value at each step of market involved is generated and the marketing strategies needed to be adopted by the	The value chain analysis of different crops are done.

4. Feedback System

4.1. Feedback of the Farmers to KVK

Name of KVK	Feedback			
	Technology appropriations	Methodology used	Benefits of OFT/FLD	Future Adoption
Sundargarh	Demonstration of medium duration paddy c.v. Hiranmayee	Through farmer promoters, Personal Interaction, GD	Higher yield, better plant vigour	Promising technology, can be replicated in lowland condition
Sundargarh	Demonstration of performance of transplanted Maize	Through farmer promoters, Personal Interaction, GD	Maize provided early cash, Optimum land utilization	Sustainable technology can be replicated in > 5000ha of maize areas
Sundargarh	Demonstration of micronutrient (Zn & B) application in paddy	Through farmer promoters, Personal Interaction, GD	Early returns due to higher vigour & optimum plant density	Technology superior and can be replicated in maize areas >4000 ha
Sundargarh	Demonstration of ragi var. chilika	Through farmer promoters, Personal Interaction, GD	Good quality fruit with better colour and keeping quality. Better market price	Can be adopted in irrigated uplands. Under vegetable cultivation
Sundargarh	Demonstration of pointed gourd c.v. Swarna	Through farmer	More yield than the local	Needs refinement

	aloukik	promoters, Personal Interaction, GD	variety	regarding time of planting for higher productivity
Sundargarh	Demonstration of hybrid tomato c.v. Swarna sampad	Through farmer promoters, Personal Interaction, GD	More income as the early crop gives higher price	Can be adopted by vegetable growers for raising nursery in kharif season.
Sundargarh	Demonstration on use of low tunnel poly house for off –season nursery raising (Rainy & winter)	Through farmer promoters, Personal Interaction, GD		
Sundargarh	Popularization of fruit fly management in mango	Through farmer promoters, Personal Interaction, GD
